

# HOW TO CREATE A COLOR PALETTE WITH AI

Use AI to develop a palette that fits your brand - without guessing, copying trends, or starting from random colors.

## 1. Tell AI what the brand needs to feel like

Describe the business, who it serves, and the impression you want the brand to create. Use descriptive words that fit the brand personality and customer experience.

## 2. Give AI context

Include the business type, ideal customer, logo or website if you have one, current branding, and anything you do not want. More specific context produces a more useful result.

## 3. Ask for several palette options

Ask AI for 3 distinct directions instead of accepting the first answer. Have it create 5-7 coordinated colors for each option and provide the HEX code for every color.

## 4. Ask AI to explain how each color should be used

Have AI identify which colors should be used for backgrounds, headings, body text, buttons, highlights, borders, and accents. This turns a list of colors into a usable brand system.

## 5. Upload an existing logo or image if you have one

AI can use the visual as a reference and build a coordinated palette around it. You can ask it to preserve important brand elements while updating the overall look.

## 6. Refine the direction

If an option is close but not right, tell AI what feels off. Ask for adjustments to the overall mood, level of contrast, energy, softness, sophistication, or style until it fits the brand.

## 7. Save the final HEX codes

Once you choose a palette, save the HEX codes in your design platform or brand kit so the same colors are used consistently across ads, social graphics, websites, presentations, and print.

### SAMPLE AI PROMPT

*"Create 3 professional brand color palette options for [business]. My audience is [audience]. I want the brand to feel [3-5 descriptive words]. For each option, give me 5-7 colors with HEX codes, explain the purpose of each color, and tell me which combinations to use for backgrounds, text, buttons, and accents. Make each option noticeably different."*

### OPTIONAL: ADD FONT STYLES

If you wish to add font styles, ask AI to recommend 2-3 font pairings that match the chosen brand direction. Have it identify a heading font, body font, and optional accent font, explain when to use each one, and confirm whether the fonts are available in the design platform you use.

**Prompt:** "Recommend font pairings that match this palette and brand direction. Give me a heading font, body font, and optional accent font, plus simple rules for how to use them."
